Skills

Languages: Python, Java, C#, Rust, C/C++, JavaScript, TypeScript, Go

Frameworks, Data & Cloud: Spring Boot, .NET, Django, Node.js, Angular, React, PostgreSQL, DynamoDB, GraphQL, AWS, Azure

Tools: Docker/Kubernetes, Helm, Terraform, Git, Linux, CI/CD, Claude Code

Professional Experience

Software Engineer (Contract) — London, UK
Quaisr — Aug 2026 – Present

- Led the work to make Quaisr's engineering simulation platform, used by aerospace, defense and pharmaceutical firms including BAE Systems, Boeing and AstraZeneca, highly available on Kubernetes across AWS and customer-hosted deployments.
- Made the platform's backend services safe to run as multiple replicas: coordinated work across instances with Kubernetes leases, fixed concurrency races and lost writes, and kept services running through database outages and rolling deploys.
- Made high availability a per-cluster setting in Terraform and the deploy tooling, so each AWS or customer environment can opt in without code changes, and ran the UI and Istio gateway at two replicas on EKS.
- Built product features end to end, from database schema to React interface, including source-code browsing and clearer error reporting for uploaded simulation blocks, after tracing a bug that silently discarded source for any project with Git history.

Technical Consultant — Remote, UK
Freelance — May 2020 – Present

- Delivered software and security engagements for around 20 clients across the UK, US, Canada and the EU.
- Carried out cloud security consultations and technical audits, reviewing client systems and code and recommending fixes.
- Built web applications in Python and Java and systems software in Rust, taking projects from research and prototyping to delivery.
- Advised on CI/CD pipelines and Infrastructure-as-Code, and wrote technical documentation for client engineering teams.

Software Engineer (Contract) — San Francisco, CA
U.S. Bank/Bento Technologies — Jan 2024 – Nov 2024

- Contributed to the successful launch of U.S. Bank Spend Management, a product available on all U.S. Bank business credit cards, enabling centralized monitoring and management of business spending.
- Implemented Single Sign-On authentication with Azure Active Directory for the Spend Management admin portal, enhancing security and streamlining the login process for more than 3,000 customer support agents.
- Led the modernization of a monolithic backend into Java Spring Boot microservices, increasing individual developer velocity by 50%.

Software Development Engineer — Arlington, VA
Amazon Web Services — Oct 2021 – Mar 2023

- Built backend services in Java, Rust and Go for AWS Inspector, a vulnerability scanner serving more than 125,000 monthly active users across 21 regions and generating over $5 million in revenue per month.
- Automated common operational tasks in Python, used daily by the team and saving over 5 hours per engineer per week.
- Served on-call twice a month for Inspector across all regions, handling around 20 customer tickets per shift.
- Built CI/CD pipelines and deployed services using Infrastructure-as-Code in TypeScript with AWS CDK, improving efficiency and replacing a long manual release process with repeatable, automated deployments.

Programmer Analyst — San Diego, CA
USC Alzheimer's Therapeutic Research Institute — Sep 2020 – Aug 2021

- Built core features for a clinical-trial data capture system used by more than 1,000 medical professionals, in Django, React and AWS.
- Developed REST APIs for user email preferences and event-triggered batch delivery, serving over 3,000 users.
- Redesigned the patient referral system GUI with responsive layouts, used by over 100,000 clinical staff, and built GraphQL APIs to fetch and aggregate data for thousands of patients across multiple databases.

Education

University of Southern California — Los Angeles, CA
Master of Science in Computer Science — 2020

University of Exeter — Exeter, UK
Master of Engineering in Electronic Engineering and Computer Science — 2018
Integrated undergraduate master's program
